			4	7		9	3	
			2	5			6

Use a consistent sweep rhythm—rows, then columns, then boxes—to avoid missing easy placements. A predictable cycle moves new progress up visually when you loop back around.

A hidden single is a cell with just one candidate. They appear constantly after each elimination round—respect for singles frequently, even in late stages of a hard puzzle.

Start each puzzle by scanning for singles: sweep every row, column, and box to find cells that have only one possible number. A couple of clean scan passes build momentum and often unlock the entire early game.

Pencil marks are your map. Add candidates as they become logical; clear them as soon as they're not. Fresh notes prevent phantom contradictions and reveal pairs and hidden singles as a game unfolds.

A hidden single is the only place a digit can go in a row, column, or box—until that cell has other marks. Check each digit 1-9 per unit to uncover hidden singles efficiently.

Try digit-focused scanning: pick a number and sweep the grid to see where it can go. This perspective makes pairing pairs and box-to-unit scans much easier to spot than unit-by-unit scans.

Pairing pairs: if a digit's candidates in a box lie in a single row (or column), eliminate that digit from the rest of that row (or column) outside the box. It's a mid-game workhorse.
