Use a consistent sweep rhythm—rows, then columns, then boxes—to avoid missing easy placements. A predictable cycle moves new progress and visibility when you loop back around.

A hidden single is a cell with just one candidate. They appear constantly after each elimination round—expect for singles frequently, even in late stages of a hard puzzle.

Start each puzzle by scanning for singles: sweep every row, column, and box to find cells that have only one possible number. A couple of clean scan passes build momentum and often unlock the entire early game.

Pencil marks are your map. Add candidates as they become logical and clear them as soon as they're not. Fresh notes prevent phantom contradictions and reveal pairs and hidden singles as a game unfolds.

A hidden single is the only place a digit can go in a row, column, or box—until that digit is placed. Check each digit 1-9 per unit to uncover hidden singles efficiently.

Try digit-focused scanning: pick a number and sweep the grid to see where it can go. This perspective makes pairing pairs and box-the-reductions much easier to spot than unit-by-unit scans.

Pairing pairs: if a digit's candidates in a box lie in a single row (or column), eliminate that digit from the rest of that row (or column) outside the box. It's a mid-game workhorse.
